SUMMARY

Software Engineer (Backend & Cloud) with 2+ years of strong expertise in architecting scalable microservices (**Python & Java , REST APIs**), automating cloud-native infrastructure (**AWS, Terraform, Docker**), and orchestrating containerized workloads on Kubernetes (**EKS**). Proven track record in streamlining GitOps CI/CD pipelines (**Jenkins, ArgoCD**) and driving system reliability through distributed observability (**Prometheus, Grafana, Splunk**) and toil reduction. **AWS Certified Solutions Architect; MS in Computer Science (SDSU)**.

WORK EXPERIENCE

Software Engineer (Backend & Cloud-Infra)
Kaar Technologies Private Limited

Jan 2022 – Apr 2024
Chennai, India

- Built and maintained Python REST APIs and backend microservices for enterprise business workflows, implementing request validation, business logic, downstream service integrations, structured error handling, and API versioning.
- Defined and evolved REST API contracts and service boundaries, including request/response schemas, error behavior, and backward-compatible changes that allowed dependent services to evolve and deploy independently.
- Improved service-to-service reliability by diagnosing downstream failures through application logs and distributed tracing, then implementing explicit timeouts, bounded retries, and controlled error handling for transient failures.
- Reduced weekly engineering toil by 5 hours by building Python/Bash post-deployment health checks for rollout status, work-load readiness, API health, and connection/timeout failures.
- Accelerated deployment velocity by ~20% across multi-stage environments by automating CI/CD workflows with Jenkins, ArgoCD, Docker, and AWS EKS, improving consistency and traceability across releases.
- Improved production observability across 10+ services using Prometheus, Grafana, Splunk, and Jaeger, reducing MTTD by ~25% and RCA time by ~30%.

PROJECTS

AI-Incident Response Platform | AWS, EKS, Terraform, Python, LLaMA 3, Prometheus & Alertmanager

2026

- Built an event-driven Python incident-response service that receives Prometheus/Alertmanager webhooks, extracts affected service and pod context, retrieves relevant Kubernetes logs, and structures the evidence for automated root-cause analysis.
- Integrated LLaMA 3 through Ollama to generate RCA and remediation guidance from deterministic alert and log context, reducing manual incident triage time by ~60% while keeping telemetry collection and correlation outside the LLM.

KubeGuardian AI | Python, Kubernetes, Terraform, FastAPI, Gemini, GCP

2026

- Built a FastAPI backend that accepts Kubernetes YAML and Terraform configurations through file upload or GitHub repository input, parses resources, and evaluates them against 14+ deterministic governance rules across security, reliability, and IaC.
- Designed a severity-based scoring engine that generates a 0–100 infrastructure health score, prioritizes findings, and integrates Gemini through Google SDK to produce targeted remediation guidance while keeping pass/fail decisions deterministic.

Infra Control Plane | Python, REST API, FastAPI, Terraform, Docker, API Authorization

2026

- Engineered a FastAPI control-plane service that exposes Terraform plan, apply, and destroy operations through REST endpoints, replacing ad hoc local CLI execution with a centralized backend workflow across dev and production environments.
- Added reusable API-key authentication, explicit confirmation for destructive operations, and PostgreSQL audit logging of environment, action, exit code, and timestamp, providing traceability across 19+ AWS resources per environment.

TECHNICAL SKILLS

Languages & OS:	Python, Java, JavaScript, Linux/Unix, Bash/Shell
Backend & APIs:	FastAPI, REST APIs, Microservices, API Design & Versioning, PostgreSQL, MySQL, MongoDB
Cloud & Infrastructure:	AWS (EC2, EKS, S3, Lambda, RDS, VPC, IAM, SNS, Route 53), GCP
CI/CD & Containers:	Jenkins, GitHub Actions, ArgoCD, Docker, Kubernetes (EKS), Helm
Observability:	Prometheus, Grafana, Splunk, Jaeger, OpenTelemetry, CloudWatch, SLI/SLO, Incident Response
Security & Networking:	RBAC, IAM, Vault, API Authentication, Audit Logging, TCP/IP, DNS, Load Balancing, VPC
AI tooling:	Gemini, LLaMA 3, Ollama, Claude, Copilot, Cursor, Amazon Bedrock, Amazon Q

EDUCATION

Master of Science in Computer Science
San Diego State University, San Diego, CA

Aug 2024 - May 2026
GPA: 3.75/4.00

Coursework: Algorithm Analysis & Design, Networks & Distributed Systems, Advanced OOPS, Computer Security

Bachelor of Engineering in Computer Science
Anna University, Chennai, India

Aug 2018 - May 2022
GPA: 3.68/4.00

Coursework: Networking, OOPS, Data Structures, Operating Systems, Computer Architecture, Software Engineering, Cloud Computing
