SUMMARY

Software & Cloud Infrastructure Engineer with strong expertise in architecting scalable backend microservices (**Python, REST APIs**), automating cloud-native infrastructure (**AWS, Terraform, Docker**), and orchestrating containerized workloads on Kubernetes (EKS). Proven track record in streamlining GitOps CI/CD pipelines (**Jenkins, ArgoCD**) and driving system reliability through distributed observability (**Prometheus, Grafana, Splunk**) and toil reduction. **AWS Certified Solutions Architect; MS in Computer Science (SDSU)**.

WORK EXPERIENCE

Software Engineer (Backend & Cloud-Infra) **Jan 2022 – Apr 2024**
Kaar Technologies Private Limited **Chennai, India**

- Built and maintained Python REST APIs in a microservices architecture; defined service boundaries and API versioning so teams could deploy independently each sprint.
- Diagnosed async microservice failures via logs and distributed tracing; shipped retry/timeout fixes that improved production stability.
- Accelerated deployment velocity by ~20% across multi-stage environments using automated CI/CD pipelines (Jenkins, ArgoCD, Docker) with centralized secrets management and end-to-end deployment traceability.
- Shipped containerized releases on AWS EKS with namespace-level RBAC, enabling consistent, repeatable deploys across environments.
- Built alerting and dashboards (Prometheus, Grafana, Splunk, Jaeger) for 10+ services, cutting MTTD ~25% and RCA time ~30%.
- Participated in blameless postmortems on-call; corrective actions cut repeat incidents over two quarters and reduced alert fatigue.
- Reduced weekly operational toil by ~5 hours by developing automated Python/Bash health checks, production readiness checklists and operational runbooks for engineering teams.

PROJECTS

AI-Incident Response Platform | *AWS, EKS, Terraform, Python, LLaMA 3, Prometheus & Alertmanager* **2026**

- Designed a production-style event-driven pipeline on AWS EKS that turns Prometheus alerts into an automated triage flow by triggering a Python webhook, that correlated right pod logs with alert context, and surfaces a clear RCA.
- Reduced incident triage time by ~60% using an applied AI automation workflow with LLaMA 3, Prometheus, and Python webhooks to synthesize distributed logs, correlate metrics, and generate instant root-cause remediation guides.

KubeGuardian AI | *Python, Kubernetes, Terraform, FastAPI, Gemini, GCP* **2026**

- Built a FastAPI service that scans Kubernetes YAML and Terraform code using direct upload or GitHub repo link with 14+ governance rules across security, reliability, IaC.
- Scores infrastructure health (0–100), prioritizes findings, and outputs Gemini-assisted remediation plus PDF reports for engineering review before hitting production and showcasing DevSecOps and compliance principles.

Infra Control Plane | *Python, REST API, FastAPI, Terraform, Docker, API Authorization* **2026**

- Engineered a FastAPI backend that runs Terraform plan/apply/destroy as REST calls for dev and prod, so infrastructure changes go through a controlled service instead of ad hoc CLI runs on laptops.
- Implemented API-key auth, a confirm guard on Destroy operation and logs every run to PostgreSQL (environment, action, exit code, timestamp) for audit traceability across 19+ AWS resources per environment.

TECHNICAL SKILLS

Languages & OS:	Python, JavaScript, Linux/Unix, Bash/Shell
Cloud & Infrastructure:	AWS (EC2, EKS, S3, Lambda, RDS, VPC, IAM, SNS, Route 53), GCP
CI/CD & Containers:	Jenkins, GitHub Actions, ArgoCD, Docker, Kubernetes (EKS), Helm
Observability:	Prometheus, Grafana, CloudWatch, Splunk, Jaeger, OpenTelemetry
IaC & Automation:	Terraform, CloudFormation, Ansible, Git/GitHub
Security & Compliance:	RBAC, IAM, Vault, API auth, audit logging; on-call, incident response, SLI/SLO
Networking:	TCP/IP, DNS, load balancing, VPC networking
Backend & Database:	REST APIs, FastAPI, microservices; MySQL, PostgreSQL, RDS, MongoDB
AI tooling:	LLM/RAG for ops tooling, Claude, Copilot, Cursor, Gemini, Amazon Bedrock, Amazon Q

EDUCATION

Master of Science in Computer Science **Aug 2024 - May 2026**
San Diego State University, San Diego, CA **GPA: 3.75/4.00**

Coursework: Algorithm Analysis & Design, Networks & Distributed Systems, Advanced OOPS, Computer Security

Bachelor of Engineering in Computer Science **Aug 2018 - May 2022**
Anna University, Chennai, India **GPA: 3.60/4.00**

Coursework: Networking, OOPS, Data Structures, Operating Systems, Computer Architecture, Software Engineering, Cloud Computing
